BlueLock Introduces a Comprehensive Set of Cloud Computing Solutions with BlueLock CloudSuite

VMware-based BlueLock CloudSuite offers a tailored selection of public and private cloud options recognizing that different clients have different needs

(VMware Partner Exchange 2010, Las Vegas, NV Booth v1 – February 8, 2010) – [BlueLock](#), an experienced provider of cloud computing and managed IT services, announces the BlueLock CloudSuite, a comprehensive set of cloud computing solutions, offering a tailored selection of Infrastructure-as-a-Service (IaaS) environments to best fit the specific needs of individual applications. BlueLock CloudSuite is an array of public and private cloud computing solutions.

BlueLock CloudSuite includes public computing options BlueLock vCloud Express, BlueLock Virtual Cloud Professional and BlueLock Virtual Cloud Enterprise, which offer users a range from self-service all the way to tailored and expertly-managed enterprise environments. CloudSuite also offers virtual private cloud solutions which can be secured on-premise or off-premise. Each computing solution is based on VMware virtualization technology to ensure compatibility across all VMware platforms inside and outside of BlueLock's environments.

"As our clients have continued to push us to offer different classes of cloud services, we've realized one size does not fit all when it comes to cloud computing," said John Qualls, President and CEO, BlueLock. "The BlueLock CloudSuite was developed with the understanding that every application has different needs, so rather than force-fitting your application into a cloud, you can pick and choose the right solution for higher efficiency and performance at the right price."

"As a top VMware vCloud service provider partner, BlueLock continues to demonstrate that it is innovative and ahead of the curve in understanding their clients' needs," said Dan Chu, Vice President, Cloud Infrastructure and Services, VMware. "The dynamic combination of the industry-leading VMware platform and BlueLock's secure and reliable cloud hosting and infrastructure expertise provides the confidence needed to run vital applications in the most efficient manner for all types of clients – from developers to Fortune 500 enterprises."

BlueLock CloudSuite

- **BlueLock vCloud Express** - This solution is suited for test and development teams, startup environments as well as departmental needs. With the quick set-up and self-service abilities, clients are able to log in and start testing in minutes without any assistance from BlueLock, for a low cost billed directly to a credit card.

- **BlueLock Virtual Cloud Professional** - Clients who need a production environment hosted and managed by outside professionals have found the BlueLock Virtual Cloud Professional platform to be just the right amount of service in the cloud, with the additional security features and performance they need for their important applications.
- **BlueLock Virtual Cloud Enterprise** - Appealing to life sciences, financial services, government clients and more who have strict compliance, performance and disaster recovery needs, BlueLock Virtual Cloud Enterprise offers a resilient and scalable cloud hosting environment designed specifically for mission-critical applications.
- **BlueLock Virtual Private Cloud** - This solution is a 100 percent virtual, fully-managed, encapsulated private cloud environment that can be installed at a user's datacenter or inside the BlueLock facility. Wherever the cloud is located, it has its own dedicated capacity and security features, but with the ability to burst into the BlueLock Cloud.

BlueLock CloudSuite is currently available. For additional information, please contact BlueLock at info@bluelock.com or visit www.bluelock.com.
