

# Bluelock | Virtual Datacenters

## ENTERPRISE READY

Many enterprises are intrigued by the potential benefits of the public cloud, but aren't willing to sacrifice security, visibility and control to get them. With Bluelock Virtual Datacenters, a VMware vCloud® Datacenter Service, you can protect your in-house IT investments and augment existing application infrastructures with public cloud resources, enabling a hybrid cloud strategy.

## ACT QUICKLY

Your Bluelock Virtual Datacenter (VDC) takes minutes to set up, either through the vCloud Director-based self-service interface or with Bluelock's Managed Services team. You can build new virtual machines (VMs) quickly from your public and private catalogs of VM templates or simply upload VMs you already have running in your environment.

## DEAL WITH THE UNKNOWN

Start small (or large) and adjust as you go with the flexibility of Bluelock Virtual Datacenter (VDC). With Bluelock VDC, you don't need to worry about over or under-provisioning because you can easily subtract and add capacity as you go, paying for only what you use.

## CHANGE YOUR MIND

With the ability to upload and download any VMware-compatible workloads, you can easily migrate to and from your Bluelock VDC. Our solution is built on open standards with OVF packaging for the transport of workloads and interoperability, with additional support for the VMware vCloud API.

## VMWARE VCLLOUD® DATACENTER TECHNOLOGIES:

- VMware vCloud Director
- VMware vCloud API
- VMware vSphere™
- VMware vShield™
- VMware vCenter Chargeback
